Inventory of Data Sources on Children's Lives

L3 Growing Up in Ireland: Infant Cohort – Wave 1 Secondary Caregiver Main Questionnaire

Title of overall study	Growing Up in Ireland (GUI): National Longitudinal Study of Children (www.growingup.ie)
Data creator	Consortium of researchers led by the Economic and Social Research Institute (www.esri.ie) and Trinity College, Dublin (www.tcd.ie)
Data funder	Funded by the Department of Children and Youth Affairs (www.dcy.a.ie), in association with the Department of Social Protection (www.welfare.ie) and the Central Statistics Office (www.cso.ie)
Data publisher	Department of Children and Youth Affairs (www.dcy.a.ie)
Brief description	<p><i>Growing Up in Ireland</i> (GUI) is a national longitudinal study of children being conducted with the aim of improving understanding of all aspects of children's lives and their development in the current social, economic and cultural environment. The principal objective of the GUI study is to describe the lives of children in order to establish what is typical and normal, as well as what is atypical and problematic. This information will be used to assist in policy formation and in the provision of services that will ensure all children will have the best possible start in life. The study focuses on a broad range of outcomes. Being longitudinal, it examines developmental trajectories over time, tracking the development of two cohorts: approx. 11,000 infants (9 months old) tracking them into early childhood and approx. 8,500 children (9 years old) tracking them into early adolescence.</p> <p>The Secondary Caregiver Main Questionnaire for the Infant Cohort recorded information on the characteristics of the secondary caregiver (health and lifestyle), their relationship with the child and socio-demographics.</p>
Key classificatory variables	ID Other; Sex; DOB; Occupation; Labour Force Status; Nationality; Disability; Race/Ethnicity; Traveller; Religion
Themes/domains	Health; Social/Emotional/Behavioural; Demographics; Relationships
Unit of observation	Study child, secondary caregiver and the household
Start date	September 2008 (Wave 1, infants at 9 months)
Completion date	August 2011 (Wave 2, same infants at 3 years)
Coverage	<p>11,134 children, born between December 2007 and May 2008, were recruited to the Infant Cohort for Wave 1 data collection. The following relates to the Secondary Caregiver Main Questionnaire:</p> <ul style="list-style-type: none"> » Target population: Secondary caregiver of the Study child. » Number of completed questionnaires: 8,632 secondary caregivers in respect of 9,755 Study children. The number of households with no secondary caregiver present was 1,359.

Method of data collection	The Secondary Caregiver Main Questionnaire was completed in respondent's home on a CAPI (Computer Assisted Personal Interviewing) basis.
Date of last publication	2010. See: <i>i</i> Williams, J., Greene, S., McNally, S., Murray, A. and Quail, A. (2010) <i>Growing Up in Ireland: The Infants and their Families. Report 1</i> , Department of Children and Youth Affairs. Dublin: Government Publications. Available at: www.growingup.ie/fileadmin/user_upload/Conference_2010/Growing_Up_in_Ireland_-_The_Infants_and_their_Families.pdf
Internationally comparable data	A British national longitudinal birth cohort study, conducted by the Centre for Longitudinal Studies and called <i>The Millennium Cohort Study</i> , has traced some 19,000 children born in the UK in 2000-01 throughout early childhood, with plans to continue tracing into adulthood. Publications available at: <i>i</i> www.cls.ioe.ac.uk/Publications.aspx?siteid=70&siteid=70 Similar longitudinal studies have been carried out in the USA, Canada, Australia and New Zealand.
Access/further information	www.growingup.ie
Notes	The Secondary Caregiver Main Questionnaire included the following standardised scale or measure: Parental Stress Scale. In households where the Study child was a twin or triplet, the secondary caregiver completed a 'Twin Module' questionnaire for the second and subsequent children, where only the child-related questions from the Secondary Caregiver Main Questionnaire were asked. These 'Twin Module' questionnaires were completed on a PAPI (Paper and Pencil Personal Interviewing) basis.
